

A FIRST REPORT OF *Aedes infirmatus* DYAR AND
KNAB IN ILLINOIS
JACK HAYES

Center for Zoonoses Research, University of Illinois, Urbana, Illinois

Three females of *Aedes infirmatus* Dyar and Knab were collected in the Xermet Waterfowl Management Area, Massac County, Illinois. The first specimen was collected May 27, 1961 as a part of an intensive study of the ecology of arthropod-borne viruses in southern Illinois. The three specimens were collected as they came to feed on man. This research was supported by U. S.

Public Health Service Grant No. CC 01037.
